

Approximation & Stability

Course notes [pdf]

- [Chapter 1: Introduction](#)
- [Chapter 2: Crash course on Functional Analysis](#)
- [Chapter 3: Approximation methods for \$\(Ax=b\)\$](#)
- [Chapter 4: Approximation methods for \$\(Ax \approx b\)\$](#)
- [Chapter 5: Spectra and their approximation](#)
- [References](#)

The video lectures

This course is designed for 13-14 weeks. Each horizontal bar is marking the end of your weekly portion.

week 1

[Welcome](#)

1. Introduction [\[pdf\]](#)

- [1.1 What this course is about - and what it's not](#)
 - [1.2 What problems?](#)
 - 1.) linear equations
 - [existence](#) and
 - [uniqueness](#) of solutions
 - 2.) [least squares problems](#)
 - Insert: [algebraic approach to \$\(A^{-1}\)\$ and \$\(A^+\)\$](#)
 - 3.) [eigenvalue vs. spectral problems](#)
 - [1.3 Outlook: Approximation methods](#)
-

week 2

2. Crash course on Functional Analysis [\[pdf\]](#)

- **2.1 Metric spaces and convergence**
 - [metric spaces](#)
 - [examples](#)
 - [convergent and Cauchy sequences](#)
 - [completeness](#)
 - [closedness, vs completeness](#)
 - **2.2 Normed spaces**
 - [definition](#)
-

week 3

- **2.2 Normed spaces (continued)**
 - examples
 - [finite-dimensional](#)
 - [infinite-dimensional](#)
 - [norm induces metric](#)
 - **2.3 Banach spaces**
 - [definition and first examples](#)
 - [further examples](#)
 - **2.4 Hilbert spaces**
 - [scalar product and examples](#)
 - [scalar product implies norm](#)
-

week 4

- **2.4 Hilbert spaces (continued)**
 - [definitions: angles, Euclidean space, Hilbert space](#)
 - [The \(PI\) or: Which norms come from a scalar product?](#)
 - [examples](#)
 - [orthogonal projection and the approximation theorem](#)
 - **2.5 Linear operators**
 - [definitions: bounded sets and bounded linear operators](#)
 - [the operator norm](#)
 - [for linear operators, boundedness = continuity](#)
 - [the set \$\mathcal{L}\(X, Y\)\$ as a normed space](#)
 - [\$\mathcal{L}\(X, Y\)\$ is a Banach space if \$Y\$ is one](#)
-

week 5

- **2.5 Linear operators (continued)**
 - [relatively compact sets](#)
 - [compact operators](#)
 - the adjoint operator
 - [definition](#)
 - [examples](#)
 - **2.6 Direct sums and projections**
 - [direct sums](#)
 - [projections](#)
-

week 6

3. Approximation methods for $(Ax=b)$ [\[pdf\]](#)

- [Applicability](#)
 - **3.1 Uniform convergence**
 - [\(i\) invertibility is infectious](#)
 - [\(ii\) inverses converge to the inverse](#)
 - [stability](#)
 - **3.2 Strong convergence**
 - [motivation, example and definition](#)
 - [again: strong vs. uniform convergence](#)
-

week 7

- **3.2 Strong convergence (continued)**
 - [\\(\(A_n\)\\) as an operator \\(\(X_n \to Y_n\)\\)](#)
 - example: the finite section method (FSM)
 - [definition and reformulation via \\(\(P_n A P_n\)\\)](#)
 - [three perspectives on \\(\(A_n\)\\) and \\(\(X_n\)\\)](#)
 - example: forward shift
 - [the FSM is not applicable](#)
 - [a small modification makes it applicable](#)
 - [preview: approximation of spectra](#)
 - **3.3 Projection methods**
 - [construction of projection methods](#)
 - [properties of the strong limit](#)
 - examples of projectors (and projection methods)
 - [example 1 - 3](#)
-

week 8

- **3.3 Projection methods (continued)**
 - examples of projectors (continued)
 - [example 4 - 6](#)
 - [example 7 - 9](#)
 - **3.4 Polski's theorem**
 - **3.5 More examples of projection methods**
 - [collocation method](#)
 - [Galerkin method](#)
 - [comparison: Galerkin vs. FSM](#)
-

week 9

- **3.6 A little insert on operator theory**

(3.6 is a bit technical. Don't worry if you're not catching every little bit of the proofs. But make sure you remember the results.)

- **3.7 Positive definiteness and rectangular finite sections**

- [positive definiteness](#)
- [positive definiteness is sufficient for applicability of the FSM](#)
- rectangular finite sections work well
 - [a simple idea and a little setback...](#)
 - [...lead to a positive result for arbitrary invertible operators \$\backslash\(A\)\$](#)

- **3.8 Differential equations: The Laplace BVP**

- [the Laplace boundary value problem](#)
 - [fundamental solutions of the Laplace operator](#)
 - [the double layer potential ansatz](#)
-

week 10

4. Approximation methods for $\backslash(Ax \approx b)$ [\[pdf\]](#)

- [4.1 Recall: The Moore-Penrose pseudoinverse \$\backslash\(A^+\)\$](#)
 - 4.2 Singular value decomposition (SVD)
 - [simple illustration for 2-by-2](#)
 - [general case](#)
 - [constructing \$\backslash\(A^+\)\$ via the SVD of \$\backslash\(A\)\$](#)
 - **4.3 Stability and the SVD**
 - **4.4 The condition number**
 - **4.5 Regularization: The TSVD**
-

week 11

- **4.6 Regularization: Tichonov regularization**
 - **4.7 Regularization: TSVD vs. Tichonov**
 - **4.8 Regularization of approximation methods**
 - [What if my projection method is not applicable? A new Polski theorem.](#)
 - [sketch of proof](#)
 - [discussion of conditions and statements](#)
 - [stability vs. M.P.-stability vs. stable regularizability](#)
-

week 12

5. Spectra and their approximation [\[pdf\]](#)

- **5.1 Properties of the spectrum**
 - [eigenvalues, spectral values, examples](#)
 - [The spectrum is closed, bounded and non-empty.](#)
 - **5.2 Spectra and dynamical systems**
 - [discrete time](#)
 - [continuous time](#)
 - **5.3 The spectral radius**
 - [formula and proof](#)
 - [When is the spectral radius equal to the norm?](#)
-

week 13

- **5.4 Spectra of convolution operators**
 - [definition and examples](#)
 - [invertibility and spectrum](#)
 - [back to the examples: invertibility and spectrum](#)
 - [outlook: periodic operators](#)
 - [Matlab: spectra and singular value splitting](#)
 - **[5.5 Approximation of spectra](#)**
-

week 14

- **5.6 Pseudospectra**
 - [definition and a little advertisement block](#)
 - [How large can the pseudospectrum be?](#)
 - [convergence of pseudospectra and approximation of spectra](#)
